

ONBOARDPLUS+ | Physicians and Advanced Practice Providers

Confusing onboarding with orientation is a common - but costly - error that many healthcare organizations make.

Broken Onboarding is Common and Costly

- The majority (88%) of organizations say they have an onboarding program, but only 33% have a formalized structure or committee.
- Organizations with one month of orientation report 66% higher turnover than those with one year of onboarding.
- Replacing a physician costs \$250,000 or more and can also leave a million-dollar hole in your revenue budget.

Distill the "Best" of Best Practices

Our proven onboardPLUS+ methodology is an efficient and highly integrated process for onboarding physicians, nurse practitioners and physician assistants. Together, we accelerate productivity ramp-up, improve retention and deliver measurable return on investment.

- Streamlined processes for getting physicians and advanced practice providers productive quickly to drive revenue
- Year-long onboarding, navigation and engagement, including families
- Mentorship guided by physician leaders to reduce turnover risk
- Accountable reporting toward measurable growth and retention goals
- Cross-functional teams and committed leadership

Your team is guided by our experienced onboarding professionals, including a physician credentialed with a master's degree in healthcare administration and professional development certification.

Your program will be sustainable because, during our short-term engagement, we teach your team what it takes to make onboarding successful over the long term.

Results We Have Achieved

- Cut credentialing time by two-thirds
- Accelerated ramp-up to full productivity by nine months
- Lowered turnover by 75%

Based on industry data for net revenue generated per physician on behalf of their affiliated hospitals, the contribution at full productivity equals \$1,448,458 annually.

While results can vary by organization, onboardPLUS+ can produce a return on investment exceeding \$1 million per physician per year through faster productivity combined with reduced vacancy rates and lower replacement costs.
